

## SECTION 14

### General Data

In this section, general data was requested regarding the approximate length of stay of paediatric patients, the percentage of paediatric admissions that are scheduled admissions and any additional information that may be relevant.

#### **Survey results**

The approximate average length of stay for paediatric patients in hospitals throughout Australia is 2.27 days. The most frequent (mode) length of stay is one day and the average maximum length of stay is eight days. Of those who responded, 67.1% of hospitals have 10% or more of their admissions as scheduled admissions.
